

We are searching for our next team member and are keeping an open mind about the personal profile. We are searching for a person with:

- **passion for finding enzyme solutions** making value of food production side streams.
- **passion for customer service.**
- **passion for project management.**
- **passion for chemometrics.**
- **passion for HPLC.**
- interest in using **AI solutions.**
- Interest in **NIIR**
- **Passion for learning and contributing broadly and positively** to a small but passionate team.
- Interest in **travelling to visit our customers**

The job includes the following tasks:

1. Drive customer projects, including developing experimental plans in collaboration with customers and customer responsible colleagues.
2. Conduct application trials and laboratory analyses in accordance with safety regulations, Good Laboratory Practice (GLP), and internal procedures.
3. Perform data analysis, prepare technical reports, and ensure proper data archiving.
4. Maintain and calibrate laboratory equipment in accordance with supplier guidelines and internal procedures.
5. HPLC competences
 1. Prepare samples for HPLC analysis in accordance with specific analytical requirements.
 2. Use the proprietary HPLC software to perform sample analysis and conduct data analysis.
 3. Perform routine maintenance and calibration of HPLC-SEC equipment.
 4. Stay up to date with current technologies and developments relevant to future system upgrades.
6. Arrange external analyses of samples when necessary.
7. Receive and dispatch raw materials and samples to external stakeholders.
8. Ensure proper laboratory housekeeping, including cleaning, organisation, disposal, and labelling of raw materials, chemicals, and equipment in line with LEAN laboratory practices.
9. Develop new and update laboratory procedures where required.
10. Ensure compliance with relevant regulations governing the handling of chemicals and food materials.
11. Oversee preparation of Safety Data Sheets (SDS) and ensure regulatory compliance.
